Program of the GAP Days 2014, August 25-29

Version from August 19, 2014 at 14:24

Talks are at Pontdriesch 14/16 in room 008, coding sessions in rooms 003 and 103.

Monday, August 25

10:00	Coding session and discussion
	Welcome session (room 008)
15:00	Vinay Wagh
	Less Generators - finding small generating sets for modules (part of the homalg project)
15:30	Martin Bies
	String theory, sheaf cohomology and the homalg package
16:00	Johannes Hahn
	Coxeter groups and Kazhdan-Lusztig theory in GAP
	α 1 + τ α

16:30 Chris Jefferson
Ferret – a modern C++ rewrite of Partition Backtracking in GAP

17:00 Max Horn
libsing – an interface between Singular and GAP

17:30 Christof Söger
NormalizInterface – an interface between normaliz and GAP

Tuesday, August 26

10:00 Sebastian Gutsche & Max Horn
 How to make a GAP package
 16:00 Pedro A. García-Sánchez
 Recent progress in the NumericalSgps package
 16:30 Manual Delgado
 intpic – a package for drawing integers, by emphasizing some subsets.
 17:00 Hebert Perez-Roses
 Graph construction via voltage assignment with GAP
 17:30 Delaram Kahrobaei
 TBA

Wednesday, August 27

10:00 Reimer Behrends
 HPC-GAP: Design and Implementation of a Concurrency Model for GAP
 16:20 Markus Pfeiffer
 Two (HPC)GAP infrastructure packages in the making: GAPData and Matrix
 16:50 Sebastian Gutsche & Sebastian Posur
 ToolsForHomalg - Tools for caching and propagation & CategoriesForHomalg - A GAP-based
 meta language for category theory based computations
 17:30 Thomas Breuer
 Recent progress concerning the GAP packages AtlasRep, CTblLib, CTBlocks, MFER
 19:00 Dinner at the "Labyrinth"

Thursday, August 28

10:00 Alexander Konovalov

Continuous integration, package update mechanism and release management in GAP

Friday, August 29

10:00 Open discussion: Your wishes for the future of GAP13:30 Open discussion: Results of the meeting, feedback

Abstracts of talks and sessions

Sebastian Gutsche & Max Horn (TU Kaiserslautern & JLU Gießen)

"How to make a GAP package"

In this hands-on workshop, we will explain the basic requirements for creating a simple GAP package from scratch. After a brief introduction, participants can immediately apply this with our help. For this, participants should bring their laptops and, if present, some code they want to publish in a package. We also plan to cover more advanced aspects of creating and maintaining a GAP package. Which topics are covered in part also depends on requests by participants. Some possibilities include:

- "Package manuals done right: GAPDoc and AutoDoc" (this will definitely be covered)
- Integrating C / C++ code into a GAP package
- Using GitHub pages as website for your package
- Automating the package release process with GitHub
- The importance of package tests and continuous integration
- Example for automated testing using GitHub and Jenkins
- **–** ...

Hebert Perez-Roses (University of Lleida, Spain)

"Graph construction via voltage assignment with GAP"

The voltage assignment technique takes a directed "base" graph B, and a group G, and constructs another graph L with |L| = |B||G| vertices, where |B| is the number of vertices of |B|. L is usually called the lift of B by G, and is a generalization of Cayley graphs. The voltage assignment technique has been very successful in the construction of large graphs with small degree and diameter. We are now working on the implementation of this technique in GAP, and we would like to bring into consideration of the GAP community the algorithms and data structures used, as well as to discuss the best alternatives for an efficient implementation.

Vinay Wagh (IIT Guwahati, India)

"LessGenerators – finding small generating sets for modules (part of the homalg project)"

A GAP package called "LessGenerators" has been developed by Mohamed Barakat and myself, to implement the Quillen-Suslin algorithm in computer algebra systems SINGULAR and GAP. The package is part of the homalg project. The aim of this package is to provide a tool for finding a minimal generating set for a given module. The package provides universal implementation in the sense of CASs, i.e. it can use any CAS supported by the homalg project for ring arithmetic.
